

Darshil Desai

darshildee@gmail.com | [Portfolio](#) | [LinkedIn](#) | Tampa, FL

Sr. Data Engineer & Data Scientist with 7+ years of experience building scalable data platforms, analytics systems, and recommendation engines. Delivered \$1.5M+ in revenue impact through production data pipelines and data products built with Python, SQL, AWS, Airflow, Databricks, and Redshift. Served as a technical lead, cross-functional initiatives from requirements gathering through deployment, translating complex data into products, insights, and business decisions.

EXPERIENCE

Intuitive Surgical

January 2024 - March 2026

Data Scientist

Sunnyvale, CA

- Developed and optimized scalable PySpark data pipelines on Databricks processing 10M+ records daily, reducing processing time by 50% and eliminating manual workflows through automation.
- Built and deployed a recommendation engine delivering personalized content and event suggestions for recommendations, adopted by 100+ sales representatives and increased engagement by 10%; integrated outputs into Salesforce and Tableau dashboards.
- Designed semantic data models in ThoughtSpot to enable natural language querying and self-service analytics for non-technical stakeholders, reducing dependency on ad hoc reporting and accelerating insight generation.

Miles

May 2019 - January 2024

Sr. Data Engineer

Redwood City, CA

- Architected and owned large-scale ETL pipelines processing 200M+ rows of user location data daily, supporting B2B data products generating \$1.5M+ in annual revenue using Airflow, Databricks, AWS, and Redshift.
- Modernized legacy data architecture by integrating Kinesis streaming, Athena, and PySpark, enabling real-time analytics on large-scale user-generated data and reducing manual processing.
- Built Python-based data workflows in Apache Airflow to power Tableau dashboards and support user-facing features, including recommendation systems and real-time engagement products
- Developed high-throughput APIs serving 100+ RPS, delivering location-based prediction to production user facing applications
- Hired and led a team of 4 data engineers, owning sprint planning, requirements gathering, and system design discussions

Biznexus

August 2017 - May 2018

Data Analyst

Boston, MA

- First data hire, working closely with the CEO to analyze user and marketing data using SQL and Python; built dashboards that helped drive better decisions across the business

EDUCATION

University of the Pacific | *M.S in Data Science* | San Francisco, CA

August 2018 - May 2020

Indiana University | *Bachelor of Science in Finance & Minor in Psychology* | Bloomington, IN

August 2013 - May 2017

PROJECTS

- Capital Analytics:** Full-stack investment analytics platform (Next.js, Python) that ingests market data, tracks portfolio performance, and supports allocation decisions across trend following, thematic, and options-based strategies ([capital-analytics.vercel.app](#))
- Premia:** Python-based options analytics system that evaluates 1000+ contracts using volume, volatility, and risk-reward metrics to identify high-probability income generating opportunities. ([premia-eight.vercel.app](#))
- Web3 NFT Contract:** Developed an ERC-721 smart contract in Solidity and automated deployment of 100+ NFT assets to decentralized storage and web3 marketplaces like Opensea

SKILLS

Core: Python, SQL, PySpark

Cloud & Infra: AWS (S3, Athena, Kinesis, EC2, Firehose), Databricks

Databases: PostgreSQL, Redshift, Snowflake

ML & AI: LangChain, scikit-learn, model development & deployment

Analytics & BI: Tableau, Amplitude, Google Analytics

Dev Tools: Cursor, Codex, Git
