

Darshil Desai

darshildee@gmail.com | [Portfolio](#) | [LinkedIn](#) | Tampa, FL

Sr. Data Engineer & Data Scientist with 7+ years of experience delivering \$1.5M+ in revenue impact through production data pipelines, applied machine learning, and analytics systems. Built and owned end to end data infrastructure using Python, SQL, AWS, and Databricks: from raw ingestion to model deployment and executive-level reporting. Served as a technical lead, driving cross-functional initiatives, defining KPIs, and partnering with product teams to convert data insights into decisions that directly impact business performance.

EXPERIENCE

Intuitive Surgical

January 2024 - March 2026

Data Scientist

Sunnyvale, CA

- Developed and optimized scalable PySpark data pipelines on Databricks processing 10M+ records daily, reducing processing time by 50% and eliminating manual workflows
- Built and deployed a recommendation engine delivering personalized content and event suggestions for surgeons, adopted by 100+ sales reps and increased engagement by 10%; integrated outputs into Salesforce and Tableau dashboards
- Designed and implemented semantic data models in ThoughtSpot, enabling natural language querying for non-technical stakeholders and driving self-serve analytics adoption across the organization

Miles

May 2019 - January 2024

Sr. Data Engineer

Redwood City, CA

- Architected and owned large-scale ETL pipelines processing 200M+ rows of user location data daily, supporting B2B data contracts worth \$1.5M+ annually, built on Airflow, Databricks, AWS S3, and Redshift
- Modernized legacy architecture by integrating Kinesis streaming with big-data tools like Athena & PySpark, empowering data teams to derive insights from large volumes of user-generated data in real-time
- Built Python-based data workflows in Apache Airflow to power Tableau dashboards and support user-facing features like recommendation systems and real-time engagement
- Developed high-throughput APIs serving 100+ RPS, delivering location-based prediction to production user facing applications
- Hired and led a team of 4 data engineers, owning sprint planning, requirements gathering, and system design discussions

Biznexus

August 2017 - May 2018

Data Analyst

Boston, MA

- First data hire, working closely with the CEO to analyze user and marketing data using SQL and Python; built dashboards that helped drive better decisions across the business

EDUCATION

University of the Pacific | *M.S in Data Science* | San Francisco, CA

August 2018 - May 2020

Indiana University | *Bachelor of Science in Finance & Minor in Psychology* | Bloomington, IN

August 2013 - May 2017

PROJECTS

- **Capital Analytics:** Full-stack investment dashboard (Next.js, Python) managing a live multi-strategy personal portfolio across trend-following, theme investing, and options income; backtested to 48%+ average annual returns (capital-analytics.vercel.app)
- **Algorithmic Trading:** Built a Python-based algorithmic trading system using automated signals & risk managed strategies
- **Web3 NFT Contract:** Developed an ERC-721 smart contract in Solidity and automated deployment of 100+ NFT assets to decentralized storage and web3 marketplaces like OpenSea

SKILLS

Core: Python, SQL, PySpark

Cloud & Infra: AWS (S3, Athena, Kinesis, EC2, Firehose), Databricks

Databases: PostgreSQL, Redshift, Snowflake

ML & AI: LangChain, scikit-learn, model development & deployment

Analytics & BI: Tableau, Amplitude, Google Analytics

Dev Tools: Cursor, Codex, Git
